

St. Francis Assisi Catholic Church West Des Moines, Iowa

Engineers with Performance Engineering were responsible for the structural engineering services for two additions at this existing facility. A new worship area of about 19,000 square feet was added on the west side and a classroom and administrative area of about 23,000 square feet was added on the east side. The new worship area includes an 11,000 square foot sanctuary with a large vaulted glue laminated wood roof system bearing on interior columns and exterior masonry bearing walls .
